

116. The scaled-up image 116 may then be displayed on the remote application rendering window 118.

[0036] The projection view image 108 may be scaled down by the 3-D graphics accelerator 110. Scaling may include reducing the size of the projection view image 108 based on a dynamically selected scaling factor. The scaling factor used to scale down the projection view image ~~[[208]]~~ 108 may be determined by the performance requirements of a particular client or adaptively depending on the workflow in use. The scaling process is described in more detail with reference to Figure 4.
